S3 SpeedPulse XT

DESCRIPTION

The best welding properties.

The state-of-the-art processor ensures optimal interaction of all parameters and components involved in the welding process. This way you can achieve maximum performance during processing and maximum productivity.

Performance advantages are guaranteed by fast MIG-MAG welding processes.

All Speed processes are available with the S series to ensure the widest range of applications. With the included SpeedPulse XT, TwinPuls XT, SpeedArc XT processes and optional upgrades SpeedUp, SpeedCold, and SpeedRoot you can weld in a **faster** way with **higher** quality and **less spatter** during all welding operations.

Well-designed industrial frame.

Robust metal frame, lowered bottle holder, lifting eyes, torch holder: The welding systems of the S series are designed and built to provide you with support in your welding challenges for many **years**.

Future-proof.

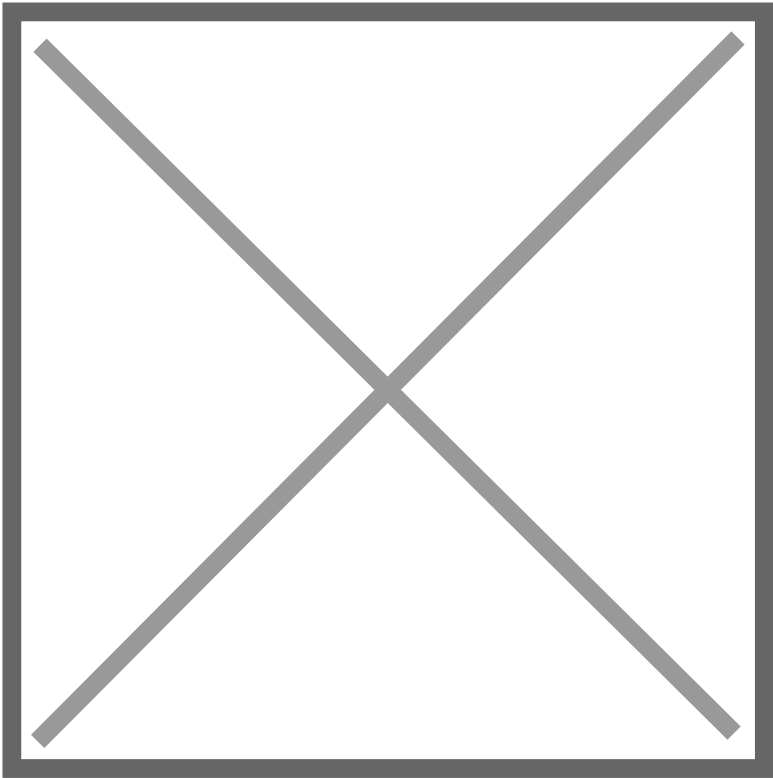

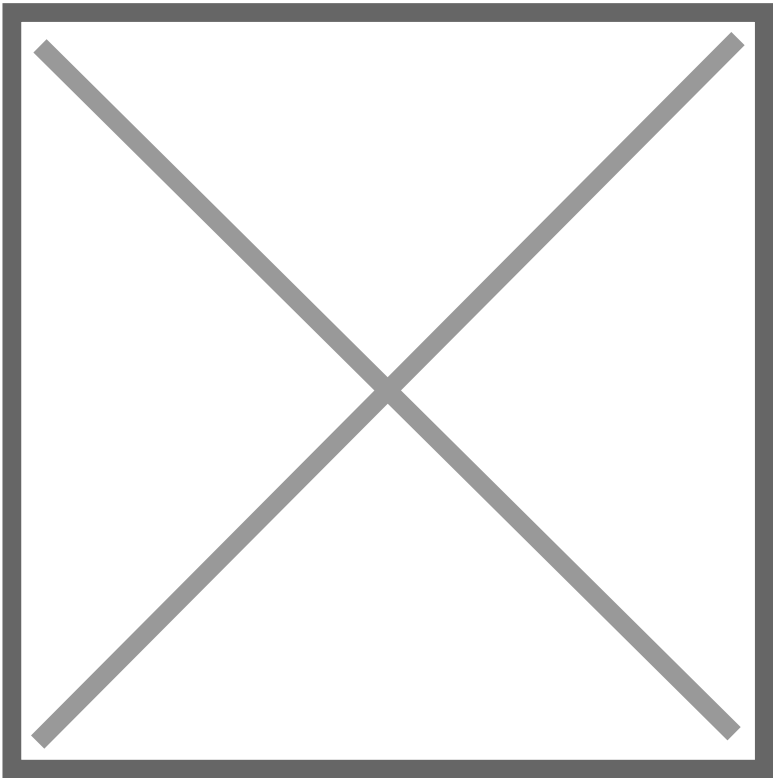

The S series allows for any **upgrades**. This means you can customize the technical equipment of your welding system at any time to adapt to new requirements. With this approach, you ensure flexible and future-proof solutions.

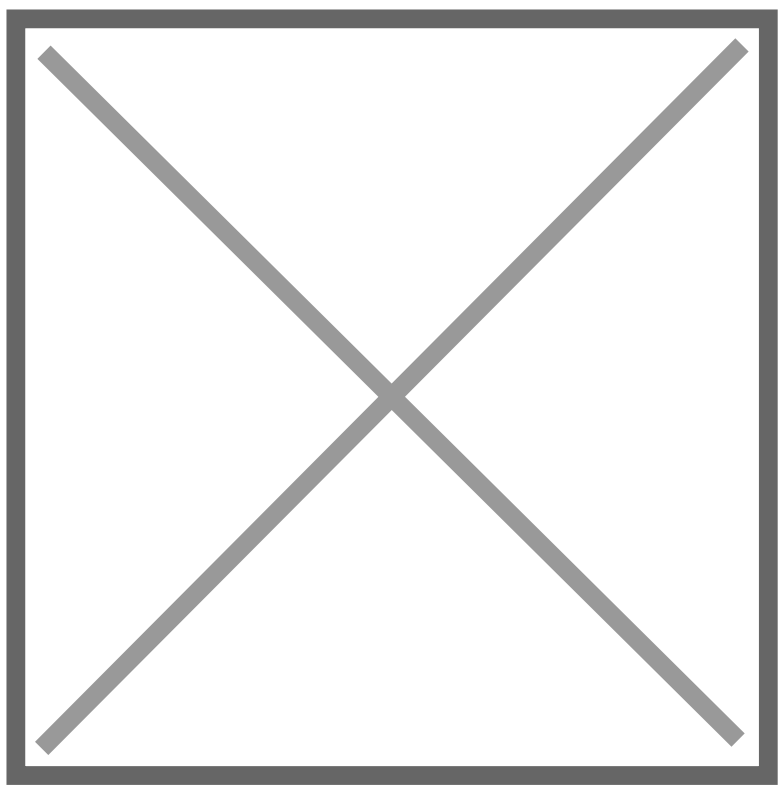

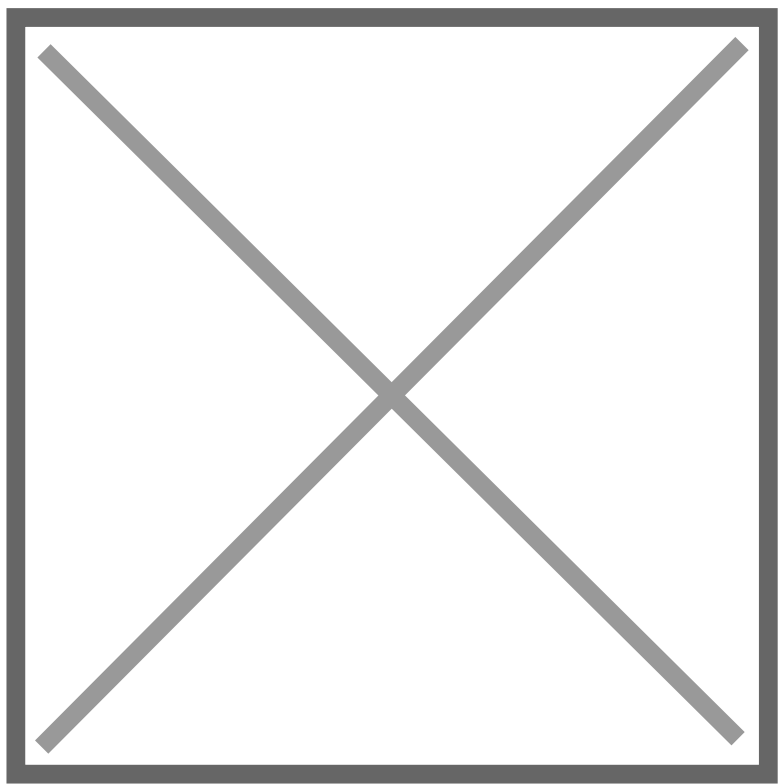

Package in accordance with EN1090 standard

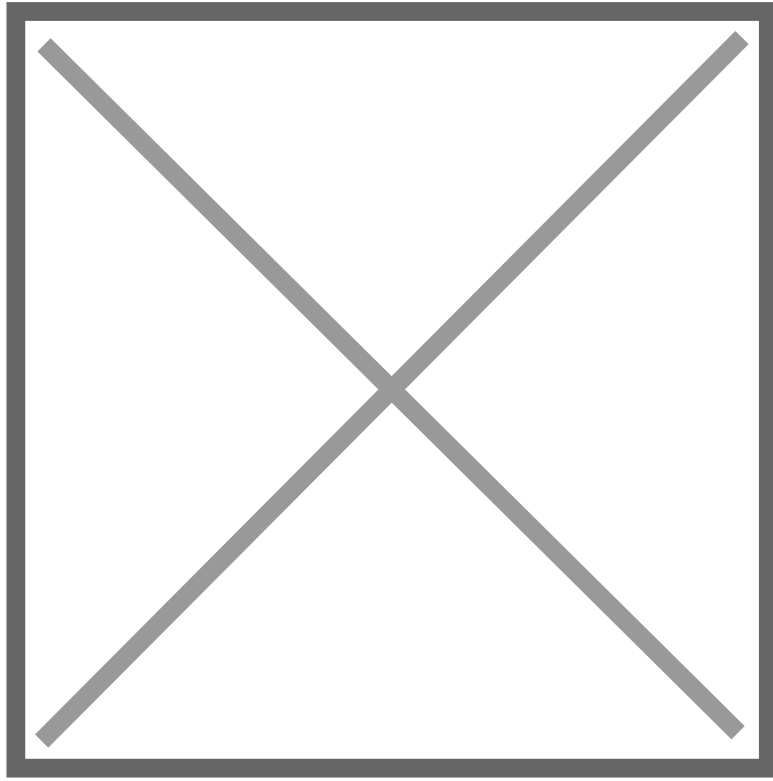

Save yourself individual testing of your welding results, which is costly and time-consuming! The WPS booklet from Lorch, included in the equipment, contains instructions for all standard welding procedures specific to welding, independently certified, so you can perform **welds compliant with EN1090 standard without difficulty**.
